

SHARON MWANGI

Junior Full Stack Developer

+254 742 386 462 · mwangiiisharon@gmail.com · Nairobi, Kenya · github.com/Wangariiisharon · [Portfolio](#)

PROFILE

Frontend-focused Software Engineer with 2 years of production experience building and maintaining web applications using React, Next.js, TypeScript, JavaScript, HTML5, and CSS3. Experienced working remotely with distributed teams, integrating REST APIs and GraphQL services, working with PostgreSQL and Firebase, testing features, and resolving defects. I particularly enjoy roles where I can work directly with users and clients, understand their requirements, and translate them into practical, working solutions.

TECHNICAL SKILLS

Frontend: React, Next.js, TypeScript, JavaScript (ES6+), HTML5, CSS3, responsive web applications, cross-browser development, UI design implementation, reusable UI components, Framer Motion, state management, Jest

Backend & APIs: Node.js, RESTful APIs, GraphQL, third-party API integration, server-side development, Gemini API, authentication and access control

Databases & Data: SQL/PostgreSQL (Supabase), NoSQL (Firebase), database design, data structuring, query optimization

Testing & Quality: Manual QA, functional testing, cross-browser testing, debugging, bug fixing, code reviews, code quality, pre-launch QA

Tools & Practices: Git, GitHub, Git filter-repo, Vercel, CI/CD troubleshooting, deployment debugging, technical documentation, API integration documentation

Development Practices: Agile/iterative development, sprint-based delivery, daily standups, stakeholder collaboration, requirements analysis, technical troubleshooting

EXPERIENCE

Full-stack Developer, Norah Digital April 2025 – January 2026

Remote, fully distributed team

- Led development of multi-page production websites using **Next.js, React, and JavaScript**, taking projects from client brief and technical planning through development, QA, and deployment.
- Managed multiple concurrent client projects from **scoping and pricing through delivery**, achieving **100% on-time completion** across assigned projects.
- Collaborated directly with clients and stakeholders to clarify **project requirements**, discuss technical trade-offs, incorporate feedback, and deliver features against project timelines.
- Built and maintained production web interfaces with **Next.js and Sanity CMS**, translating client requirements and content into clean, reusable, responsive components.
- Architected **Sanity CMS content workflows across 3+ client sites**, enabling non-technical stakeholders to independently publish and update website content.
- Integrated **REST/third-party services**, including Resend for transactional email and contact-form handling, alongside analytics tracking across client projects.

- Delivered **100% mobile-responsive and cross-browser-compatible** websites through structured pre-launch QA audits, identifying and resolving broken links, missing accessibility attributes, outdated content, and visual issues before handoff.
- Applied frontend **performance and SEO best practices**, including semantic HTML, structured headings, clean URL architecture, and optimized rendering to improve crawlability and user experience.
- Implemented analytics instrumentation and analyzed underlying data, translating technical findings into clear, actionable updates for non-technical clients.
- Diagnosed and resolved a **deployment pipeline reliability issue** caused by a stale framework preset, tracing the problem to its root cause and validating the fix across environments.
- Maintained clean, documented code and **Git history** across concurrent projects, including repository cleanup and history management using `git filter-repo`.
- Worked in an **iterative, sprint-style development workflow**, providing proactive written status updates and coordinating asynchronously with distributed team members.

Fullstack Developer, Gessic July 2023 – February 2025

Nairobi, Kenya, Remote

- Designed and built dynamic React and TypeScript components for dashboard analytics, trip management, and real-time vehicle tracking, connecting live backend data to reliable user interfaces.
- Integrated frontend applications with RESTful APIs and backend data services, ensuring reliable data flow between interfaces and backend systems.
- Optimized Firestore data structures and database queries for faster data retrieval, improving system responsiveness and reducing fleet operators' time spent accessing operational information by **20%**.
- Integrated server-side rendering (SSR) and static site generation (SSG) in Next.js to improve application performance, loading speed, and SEO.
- Optimized Next.js applications by improving rendering strategies, asset loading, API usage, and client-side performance across different devices and browsers.
- Implemented secure authentication and role-based access control with Firebase Authentication, protecting user accounts and ensuring appropriate access to application features.
- Worked directly with backend data access and authentication flows, developing a strong understanding of how databases, APIs, and frontend applications connect in production systems.
- Collaborated with backend developers and non-engineering stakeholders to translate business requirements and reporting needs into functional technical solutions, explaining technical trade-offs in clear, practical terms.
- Tested and debugged shipped features across browsers, identifying functional issues and visual inconsistencies during internal reviews and resolving them before client delivery.
- Participated in iterative development and internal code reviews, incorporating stakeholder feedback while maintaining clean, maintainable, and well-documented code.
- Documented code, setup instructions, API integrations, and handover information to support ongoing maintenance and knowledge transfer.

PROJECTS

- **AskTheVault:** a retrieval-augmented document search application built on Supabase for storage and the Gemini API for generation, direct experience wiring a database and an AI API into a working product end to end.
- **VidMetrics:** an analytics dashboard turning raw YouTube competitor data into clear, at-a-glance metrics such as subscribers, likes, and engagement.
- **SongaTrack:** contributed to a real-time fleet tracking dashboard, streaming live vehicle location data into a clean, readable interface.
- **Job Aggregation Platform (ongoing):** full-stack tool built with Next.js, TypeScript, and Firebase, structuring real-time data pulled from REST APIs and RSS feeds for clean, reliable display.
